

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (Previously presented) An image data printing system comprising:
- an image data memory device for storing image data therein;
- a print device including:
- a first memory section obtaining and storing the image data stored in said image data memory device therein;
- print data making means for converting the image data stored in said first memory section into print data every time execution of print is instructed;
- a print section capable of printing an image according to said print data;
- a second memory section storing the image data stored in said first memory section after the print section has completed printing; and
- a communication device including communication sections for transmitting and receiving the image data which are provided respectively for said image data memory device and said print device, and communication passages for connecting said communication sections to each other.
2. (Original) The image data printing system according to claim 1, wherein said image data memory device is provided distantly from said print device.

3. (Original) An image data printing method for printing image data stored in an image data memory device by a print device, comprising steps of:

transmitting image data from said image data memory device through communication means to said print device;

storing the image data received by said print device in a first memory section of said print device;

converting the image data stored in said first memory section into print data that can be printed in a print section of said print device;

performing a print operation by said print section in accordance with said print data; and

storing the image data stored in said first memory section in a second memory section of said print device.

4. (Original) The image data printing method according to claim 3, wherein said image data memory device is provided distantly from said print device.

5. (Original) A print device comprising:

a first memory section capable of storing image data stored in an external image data memory device;

print data making means for converting the image data stored in said first memory section into print data every time execution of print is instructed;

a print section capable of printing an image according to said print data; and

a second memory section storing the image data stored in said first memory section after the print section has completed printing.

6. (Previously presented) An image data printing system comprising:

an image data memory device for storing image data therein;

a print device including:

a first memory section obtaining and storing the image data stored in said image data memory device therein;

an image data converter for converting the image data stored in said first memory section into print data every time execution of print is instructed;

a print section capable of printing an image according to said print data;

a second memory section storing the image data stored in said first memory section after the print section has completed printing; and

a communication device including communication sections for transmitting and receiving the image data which are provided respectively for said image data memory device and said print device, and communication passages for connecting said communication sections to each other.

7. (Previously presented) A print device comprising:

a first memory section capable of storing image data stored in an external image data memory device;

an image data converter for converting the image data stored in said first memory section into print data every time execution of print is instructed;

a print section capable of printing an image according to said print data; and

a second memory section storing the image data stored in said first memory section after the print section has completed printing.

8. (Previously presented) The image data printing system of claim 1, wherein the second memory section comprises a disc drive device.

9. (Previously presented) The image data printing system of claim 1, wherein the communication passages comprise a wire transmission system.

10. (Previously presented) The image data printing system of claim 1, wherein the communication passages comprise a wireless transmission system.

11. (Previously presented) The image data printing method of claim 3, further comprising providing delete preventing data to the image data in the second memory section.

12. (Previously presented) The print device of claim 5, wherein the second memory section comprises a disc drive device.

Amendment under 37 C.F.R. § 1.111
U.S. Application No. 09/533,107

13. (New) The image data printing system according to claim 1, wherein said image data is unconverted data.

14. (New) The print device according to claim 5, wherein the image data is unconverted data.
